Mobile App

By: Abby Bowerman, Clare Kochanski, Kaitlyn Starkey

Elevator Pitch

"Our product is a movie, restaurants, or any category of your selection decision tool. Users of 2 or more can create or login to their account and find friends to play with. By selecting a topic and swiping through various options within that category, users will be able to form a common decision for any topic. The decision making process becomes as simple as swiping left or right with your friends!"

Project Timeline

Completed Tasks:

- Layout of the login screen
- Layout of the sign up screen
- Layout of the home screen
- Transitions between screens

Project Timeline

Remaining Tasks:

- Database to store usernames and passwords
- Search function to lookup other users
- Implementing the API
- Text view to show the number of games that has been played

Use Case Description

Use Case: User home page

Actors: Registered user, new user

Description: Registered user must login with correct username and password. The new user would have to create an account with a valid username and password. They must fulfill these requirements before accessing their home page.

Cross Ref: User shall be brought to their personal home screen upon login and shall require a username and password with each login from the login menu feature.

Use-Cases: The registered user must have completed the log in use case. The new user must have completed the create account use case.
